Experience

Senior Software Engineer - Android Apr 2025 – Present
Truecaller *Bangalore, KA*

- Scaled the *LLM*-powered Message ID to **100M+** daily users within a month by re-designing the core library.
- Revamped the client analytics infrastructure, improving business-critical analysis for more than **5** features.
- Strategized and led the migration of the app to Material 3, aligning the app with modern Android UI standards.
- Ensured high availability for the LLM-powered Message ID backend services, catering to its **100M+** users

Software Engineer - Android Aug 2021 – Mar 2025
Truecaller *Bangalore, KA*

- Led the development of Truecaller's Message ID feature, achieving over **350M+** daily impressions.
- Built several Smart SMS features for Truecaller's Inbox, serving over **80M+** daily active users.
- Optimized the startup performance of the patented parser library, decreasing initialization time by **30%**.
- Implemented a powerful CTA detection feature for text messages to identify phone numbers, URLs, emails, and more, improving user engagement by **20%**.
- Developed the Message ID settings page, the first UI in Truecaller shipped using *Jetpack Compose*.

Software Engineer Jul 2019 – Jul 2021
Hitachi GlobaLogic *Nagpur, MH*

- Owned key modules, including Player UI and Parental Controls, for the *Verizon Stream TV* home launcher app.
- Implemented an efficient FWD/REW (Trick Play) functionality, improving thumbnail rendering speed by **60%**.
- Reduced CPU overhead during app startup by **30%**, significantly decreasing launch time.

Web Development Intern Jun 2018 – Jul 2018
WoodFlake *Indore, MP*

- Increased web service efficiency by **25%** by implementing RESTful APIs with an event-driven architecture using *Node.js*, *Express*, *Sequelize*, and *JWT*.
- Deployed web services to *AWS EC2* and *S3* and developed an admin dashboard using *Vue.js*.

Projects

FlowYaml | *Next.js, Kotlin, Firebase* May 2025 – Present

- A visual tool for creating and deploying rules for a rule engine, developed using Firebase Studio.
- Allows users to design flowcharts on a web app to generate YAML rules for a Kotlin-based rule engine.

K8 (Kate) | *Kotlin Multiplatform, Coroutines, Assembly* Oct 2022 – Oct 2023

- A multiplatform *Chip-8* emulator written in Kotlin, supporting all quirks and modes.
- Runs on **4** platforms: *Android*, *iOS*, *Desktop*, and *Web*, with a modular design for future platform support.

Skies | *React Native, Redux, React Navigation* Nov 2019 – Mar 2020

- A minimal and beautifully designed cross-platform weather app for *Android* and *iOS*.
- Available on the Google Play Store.

Achievements

Winner - 30 Hacks 2019 (GlobalLogic): Developed an early cancer detection app based on user lifestyle data.
Winner - Labdays (Truecaller): Recognized for projects including "WhatsApp Caller ID" and "Message ID Animations."

Technical Skills

Languages: Kotlin, Java, Scala, JavaScript, TypeScript, HTML/CSS, XML, Bash, C, C++
Frameworks: Android, Jetpack Compose, RoomDB, TFLite, ML Kit
Developer Tools: Git, Docker, Google Cloud Platform, Kubernetes, IntelliJ

Education

Bhilai Institute of Technology Durg, CG
Bachelor of Engineering in Computer Science, CGPA 8.6 *Aug 2015 – May 2019*
